

Hello there!

Meet the New Amber Pro

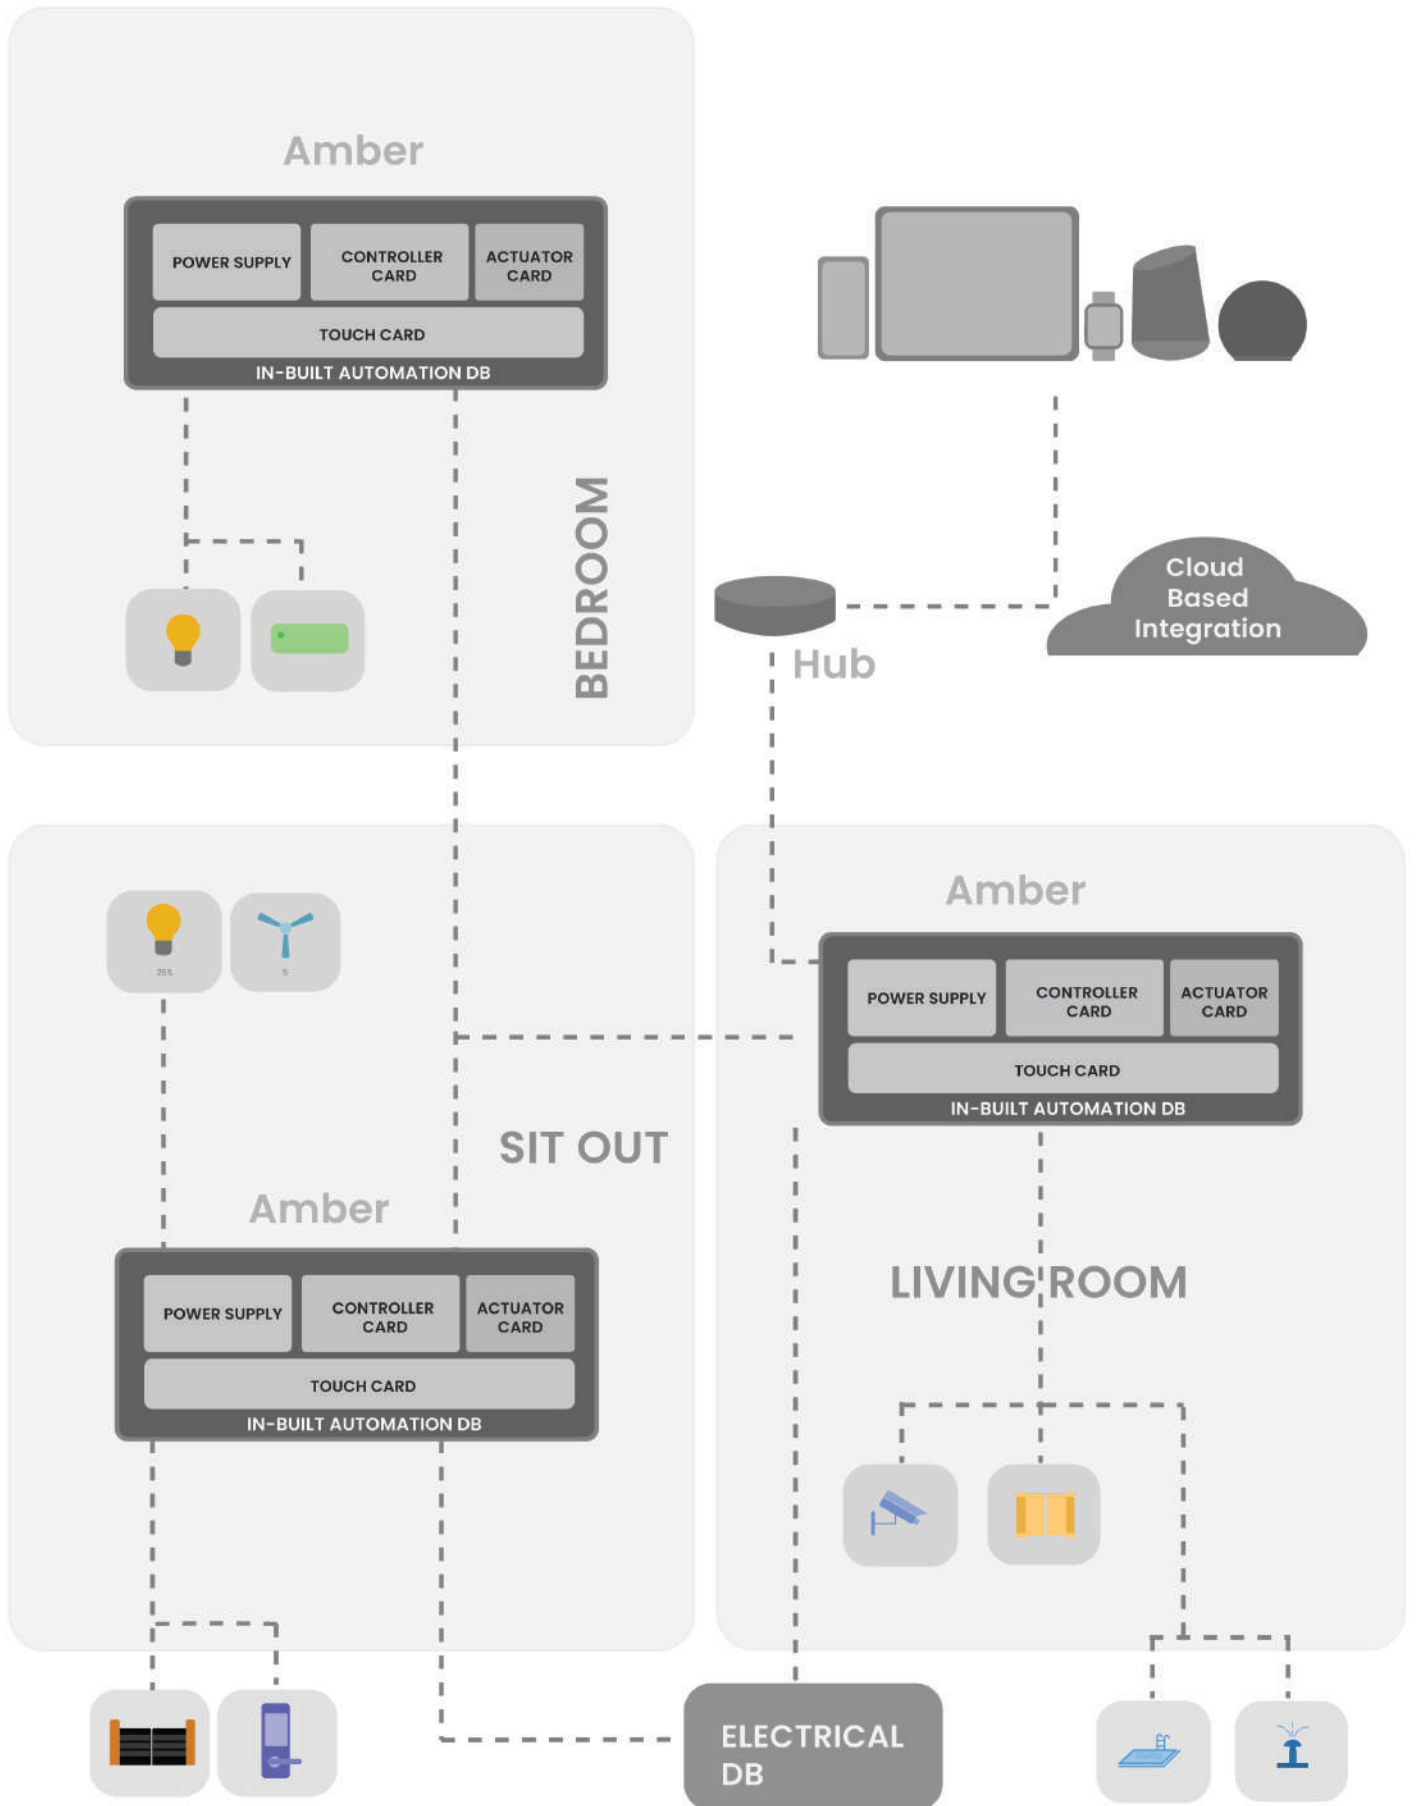

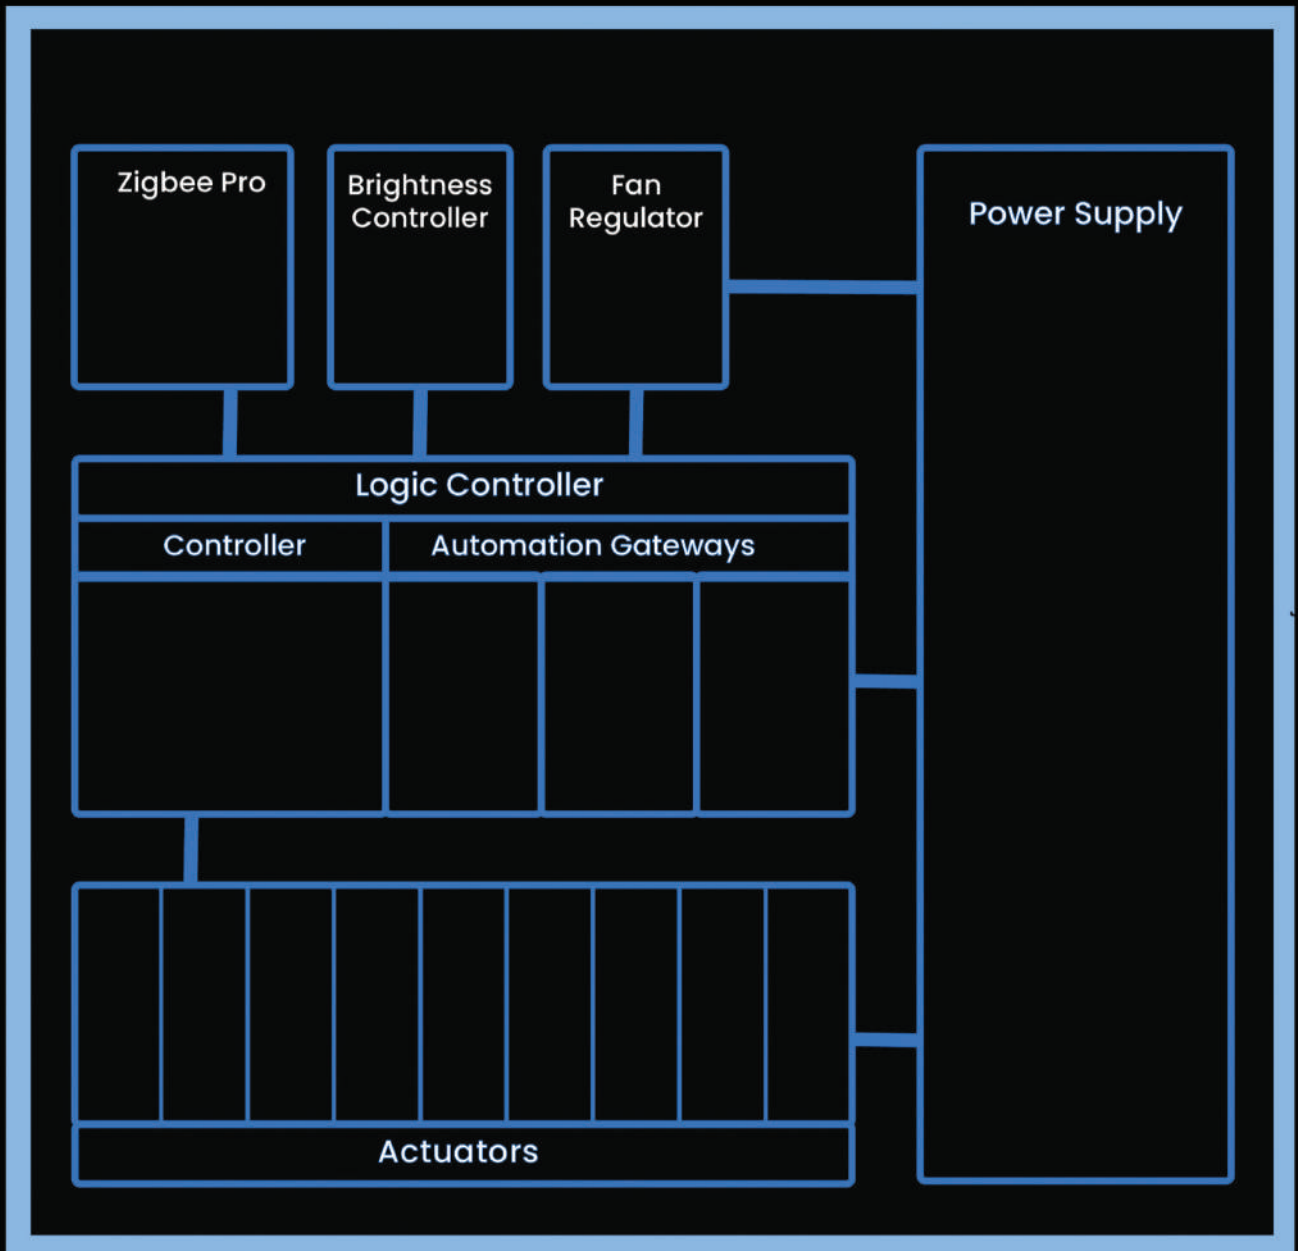

Our Technology

Curiously is a Distributed Control System (DCS). Unlike traditional centralized automation systems, Curiously uses autonomous controllers which are distributed throughout. This makes the system less complex and more reliable

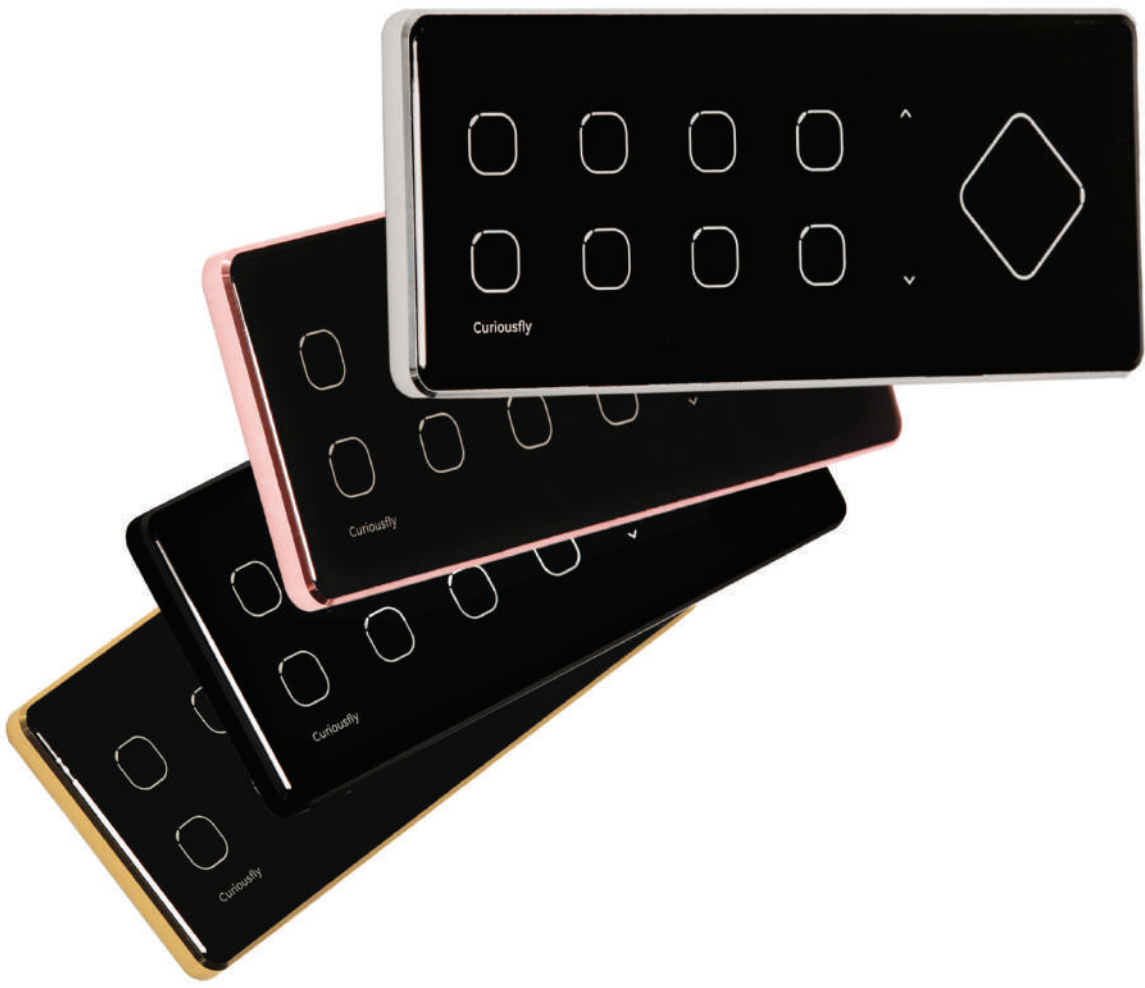

Curiouslyfly Automation Platform.

Lighting Automation

Experience personalized lighting automation system from Curiouslyfly. Curiouslyfly Amber Pro houses an in-built brightness controller which lets you integrate your dimmable lights directly into Curiouslyfly home automation platform. This means you can create a custom lighting theme to match your mood.

Security System

Seamlessly integrate any security systems like CCTV, door lock, video door bell and security sensors to Curiouslyfly automation platform. Secure your home with our security features like Panic, Away and custom intrusion alerts.

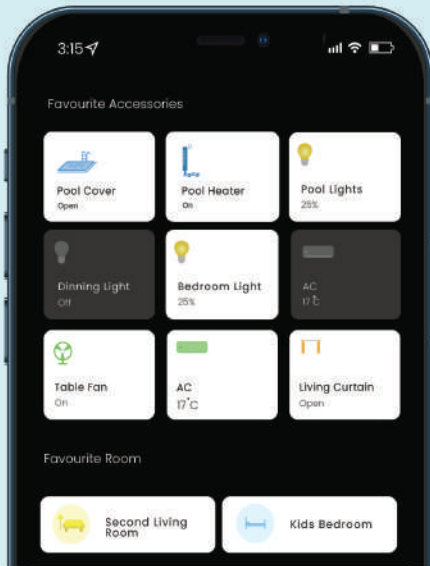

Curtain Automation

Choose to control your curtains using mobile app or voice commands. Schedule your curtains to open automatically with sunrise and wake up with natural light.

Gate Automation

With the help of in-built gateways for motorised gates, you can seamlessly integrate your gate into Curiouslyfly automation platform. So simply use your apple smart watch to open your gates while driving back from office.

Swimming Pool

Heat, filter and drain your swimming pools from anywhere in the world. You can open or close your swimming pool cover using your mobile phone or even using voice commands.

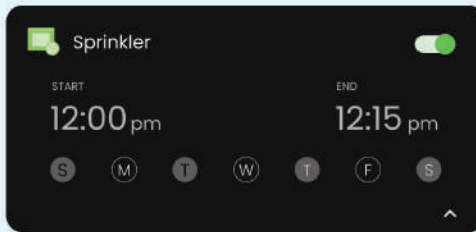

Garage Automation

Open or close your garage using Curiouslyfly app. With the introduction of in-built gateways in Amber Pro, you can directly integrate your motorised garage shutters to our platform.

Home Theater

With a simple command, "Alexa set movie mode", you can create the perfect ambience for your weekend binge. You can connect the projector, lights, screen, AC and curtains into a single system and control them using a single app.

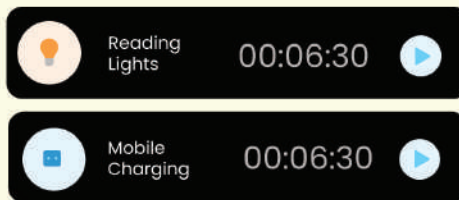

Scheduler

Schedule your routine activities like watering your garden or switching on exterior lights in the evening using Scheduler.

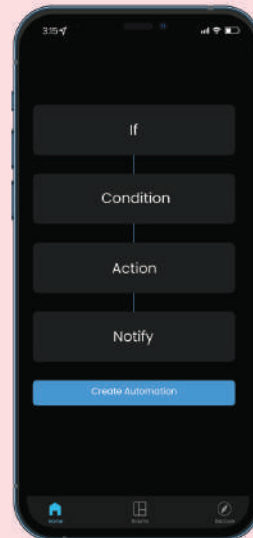

Scenes

Scenes lets you control multiple accessories at the same time. So create a scene called "Good Night" and activate it before going to bed to switch off all the lights and lock the front doors – all at once.

Timer

Timer allows your accessories to function at a pre-set time. From heating to lighting you can set the timer using Curiously app. Set the timer while charging your mobile phone or set the timer for reading lights to enjoy complete automation.

Custom Alerts

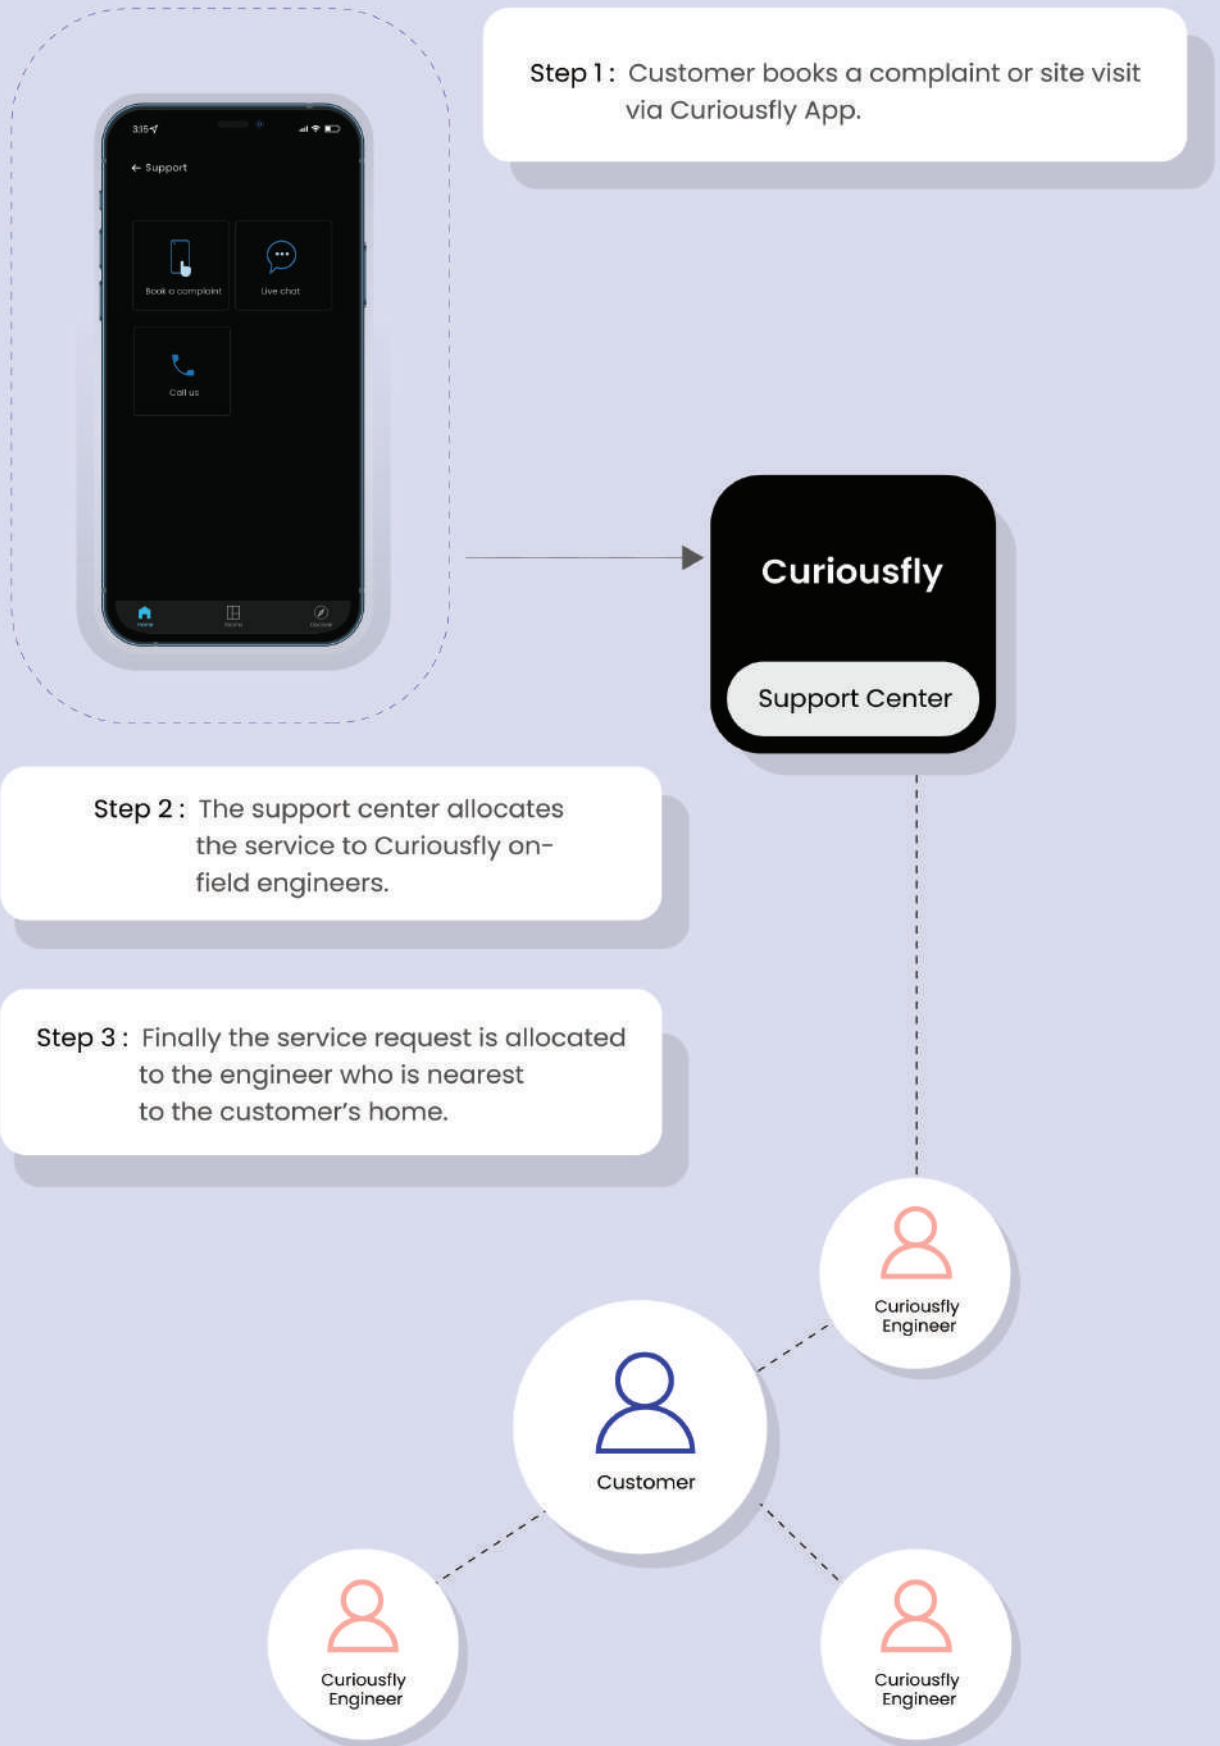

Create custom alerts like automatically turn on lights if any motion is detected outside during odd hours or notify you if somebody opened your bedroom door while you are in your office.

Voice Commands

Use your voice to control any accessory in your home. Curiously currently supports Amazon Alexa and Google Home.
